

Simplify and Streamline Compliance with PharmEcology

PharmEcology's USP<800> Assessment of Risk program will customize and standardize your hazardous drug PPE determinations throughout your facility.

Developed by pharmacists with 20+ years experience in hazardous drug management, our proprietary platform efficiently and effectively assists your team in achieving compliance with the Assessment of Risk standard, minimizes risk, and protects the health and safety of your employees, patients and the environment.

Here's what we do:

- We start with our comprehensive hazardous drug database, including drug products you may not currently have in your formulary.
- We perform an initial Assessment of Risk based on USP <800> requirements and the most recent NIOSH recommendations.
- We work with you to understand your hazardous drug handling practices, assisting in the customization process
- We incorporate your organization's PPE decisions, and customize your data allowing for application to future hazardous drugs.
- Our dynamic portal provides continuous updates to new hazardous drugs coming to market and product label changes, making it easier for your organization to be compliant with review and evaluation requirements.
- Your customized data is prepared for application into your electronic health records providing information to staff at the point of handling hazardous drugs.

What Our Customers Are Saying

"When the USP standards were first published, we wanted to comply on a system-wide level. PharmEcology not only offered a comprehensive solution, but provided us with a very strong partnership."

—Skip Lynch, Director of Outpatient Pharmacy Services, Piedmont Healthcare
